

# Package Verification - A flexible approach using Machine Vision

The problem with the traditional approach to packaging verification is that you are obliged to buy a system which by its nature will almost certainly be capable of far more than is required by your current application.

Envisage Systems have taken packaging verification to a new level in order to provide cost effective solutions for all types of application.

The various component modules shown below can be mixed and matched according to an individual products packing requirements.

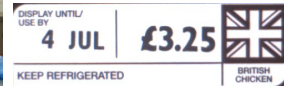

**Automatic Printer Control**

**Barcode Verification**

**Full Package Verification**

**Peripheral Verification**

Low cost mechanical frameworks can be manufactured to fit to existing production lines or stand-alone systems can be supplied where necessary.

## We will take on applications of any size
